

# Lateral Replacement Equipment Special

**Free** 4" Burst Head with purchase (\$1,200 value)

- **Free** On-Site Demo
- **No Obligation Quote**

**PortaBurst® - grow your business!**

To satisfy the rising demand for sewer lateral replacements, plumbers are turning to trenchless replacement. Trenchless lateral replacement can spare your customer the unpleasant side effects of open-cut lateral replacement and at the same time grow your business. Because PortaBurst® systems enhance your jobsite efficiency and productivity, with proper planning you can replace more than one lateral per day, increasing your business and profitability.

The HammerHead® PortaBurst® lateral replacement system is a portable, cost-effective and efficient method of replacing 2" to 6" lateral pipes in a minimum amount of time and unlike lining, the new pipe can be the same size or even a size larger than the old pipe.

## High production

The compact modular design of the PortaBurst® system allows for easy disassembly, assembly and transport and only requires small pits reducing overall excavation. Stand up access to jaw sets simplify cable installation. Once the unit is up and running production rates of up to 12 feet per minute ensure fast and efficient installation.

## Environmentally friendly

PortaBurst systems require small pits, reducing the amount of excavation and associated surface disruption, resulting in an environmentally friendly project.

## Versatile

The PortaBurst line operates at low pressure, allowing them to be run by either a dedicated power pack or any third party power supply that produces 3,000 psi and a minimum 13 gal. per minute flow.

## Quick Grip™ Burst Heads (*free 4" burst head with system purchase, \$1,200 value*)

The unique patented design lets you connect the burst head to the HDPE pipe without the use of hand tools. Compared to bolt on or fuse on pipe pullers, Quick Grip Burst Heads save you time and help increase overall production.
